Answer 2: I have no idea how to upload my code to Kaggle, I am new to it. Can you please guide me how to upload code to kaggle? A: I have no idea how to upload my code to Kaggle, I am new to it. You need to write something in Python as follows: `import os os.chdir('your_directory_where_you_have_your_data') os.chdir('your_directory_where_you_have_your_code')`  
`upload_data(dataset_path='dataset.zip', bucket_name='dataset_name', key='your_key_name')` `upload_code(dataset_path='dataset.zip', bucket_name='dataset_name', key='your_key_name')` You need to go through the data first and change your directory, then you can upload the data using the kaggle API. In addition to this, before uploading you will have to create the dataset as follows: `import urllib`  
`import requests dataset_url = "" res = requests.get(dataset_url) res.json()` You'll get the dataset id and dataset name, you'll also get the bucket name and you can use this information to upload your data. In addition to that, as you need to upload the code first, I am sure you'll have the code as a file. Let me know if it works for you. Metabolism of vitamin C in the rat. The metabolism of vitamin C in the rat was studied by measuring vitamin 82157476af
